

Circulation on the pangs...

Already a year passed since the university magazine was released. Last year, the magazine moved to Severodonetsk, in the Luhansk area, due to the circumstances of war. In such situation, the circulation of this magazine, was very much affected. At the beginning, the State recognized the existence of this magazine. After wards, the State did not support the magazine, due to the circumstances or war. During the relocation time of the magazine, for a reason or another, people who worked on this publication, became not motivated, to continue their scientific work. The division of these people, created a negative environment, not suited for the purpose of the it work. More than that, the circulation of the magazine, did not receive the evaluation of the State, during the relocation time.

At this time, it is necessary that the State will help the higher institutions, for survival, which moved outside of ATO area. One has to understand, that in such circumstances, even with the help from the Ministry, the higher institutions struggled for survival. The higher institution were in need for help. And it his help was expected from the State, because it has the authority to support the higher institutions, for safety of people.

There is a need from the State for survival for those, who left the war zone, and continued their work. They relocated together with the institutes of higher education, on the territory of Ukraine. Their life continued in some extent with the guidance of the Ministry. Unfortunately, they faced the bureaucracy of those fanatic people from the Ministry, who did not have understanding for the social drama of these people, displaced from their homes. In spite of all of these hindrances, the scientific work, continued, because, these people believed in the wonderful future of Ukraine. If the State will provide the conditions for all these institutions of higher education, then, all these workers, will be capable to proved to the students, the education that they need now.

Since the war broke up, many teachers and students left the schools, because they could not bear the night shelling, and the permanent danger. The relocation was the alternative, for the safety of people. In such situation the drop of studies, was the new way of life, without future in education, for students, in the ATO area. There is a “sinking ship,” in the ATO area. Those who decided to live there, faced moral and social obstacles. The teachers and the students could not continue their academic year, at all. Like that, the existence of the universities in the territory of Loans area, could not provide education to the students any longer. It is astonishing that people survived in such heavy situation.

After all difficulties, we continue to work, and accomplished for the last 2014 - 2015 school year, the bonuses from the Cabinet of Ministers of Ukraine, Ministries of young people and sport of Ukraine, in order to give the advanced studies, for students. Also, we have used the budget for financing, the new borders of distribution of our magazine. Likewise, the rating and indexes of the last editions, in the scientifically-metrical bases, increased substantially.

We do not abandon the hope of our circulation. Even with the limitations of the Ministries, our scientific achievement, we will allow to develop a scientific work for schools, to provide for our creative young people, the Excellency in their education.
