

Educational and professional programs, lobbying and survivals...

Today majority of high school country the professional programs of preparation the students of economic direction try to form in accordance with canons of leading Kiev high school, for default of any standards or suggestions the Ministry of education and science of Ukraine (MESU). However such program development process of preparation the future specialists which will have possibility to get qualification with a word "economist", it is possible to consider creative, serious only for high school from capital. According to all other high school, so it is here must to tell about lobbying of certain interests that be leave certain disciplines in curricula, which are attracted almost "for ears" under those educational programs, on which it follows to be oriented today. Even, conducted reforms in 2016 year in directions of preparation of students-economists, did not change existent approaches and looks of guidance, especially technical high, that have economic faculties and specialties, not those, who puts it coordinating signatures near the guarantors of the programs. And how is here are not remember the all known anecdotic utterance, that "us it is impossible without white color!" It is means, that you can tell and writing, what you pleasing, but if at the list of professional discipline is not include list of "obligatory row", which is concerted the leaders of those university or other leaders of university departments, who accepts an eventual decision, so have not authority to put nothing to insert this list, even if 1/4 the professional disciplines should to accepted in general lines. These programs and plans are two documents, which provide a survival of one department, and quite other competences are the specialists, which for such plans are not answer certain direction of MESU.

It is necessary to understand that reforms, at first need to began is not from adopted old, not logical, unprofessional, is not approach to forming of plans, but from new, other positions on it, that every high school, especially not capital, can survive is not for a presence and adaptation already turned out, usual, not variable (because always so it was!). But for these, what need take at attention like as: only new relation, new poison tor preparation of specialists-professionals. For the sake of it, secondly, must be conducted the experiments, to be the created possibilities for existence of the unique programs, plans which will hang up an image is not only educational establishments, but also is show different professional points on the preparation of specialists with sound and wide competences.

We invite our authors and readers attached to the discussions on different questions and painful problems on this occasion. Because exactly from us is depending, whom future professionals-specialists we prepare and produce in independent life.
